

WISETRIBES

www.wisetribe.in

Your child uses AI every single day.

But do they know these 7 terms? Class 5–10. All of them should know these.

WWW.WISETRIBES.IN

Algorithm

A set of instructions that tells a computer what to do
— step by step.

Student version: "The recipe AI follows to make decisions"

Neural Network

A system that loosely mimics the human brain — layers of connected nodes that process information.

Student version: "AI's brain — made of connected layers"

Training Data

The examples used to teach AI how to recognize patterns.

Student version: "The textbook AI studies from."

Bias in AI

When AI reflects unfair patterns from its training data.

Example: An AI trained mostly on male doctors' data might

Student version: "When AI learns the wrong lessons fr

Large Language Model (LLM)

AI trained on massive amounts of text to understand and generate language.  Generative AI AI that creates new content — text, images, video, code — based on patterns it learned.

Student version: "An AI that read the entire internet and I

Student version: "AI that makes new things, not just f

Inference

When AI uses what it learned to respond to new inputs — the "thinking" phase. 1. Algorithm — AI's recipe 2. Neural Network — AI's brain 3. Training Data — AI's textbook 4. Bias — AI's wrong lessons 5. LLM — AI that read the internet 6. Generative AI — AI that creates 7. Inference — AI thinking live

Student version: "When AI actually uses its brain to answer"

Quick recap:

WISETRIBES
